EXPERIMENT 4B: Extending Job Application Form with Advanced Fields in Zoho Creator

AIM:

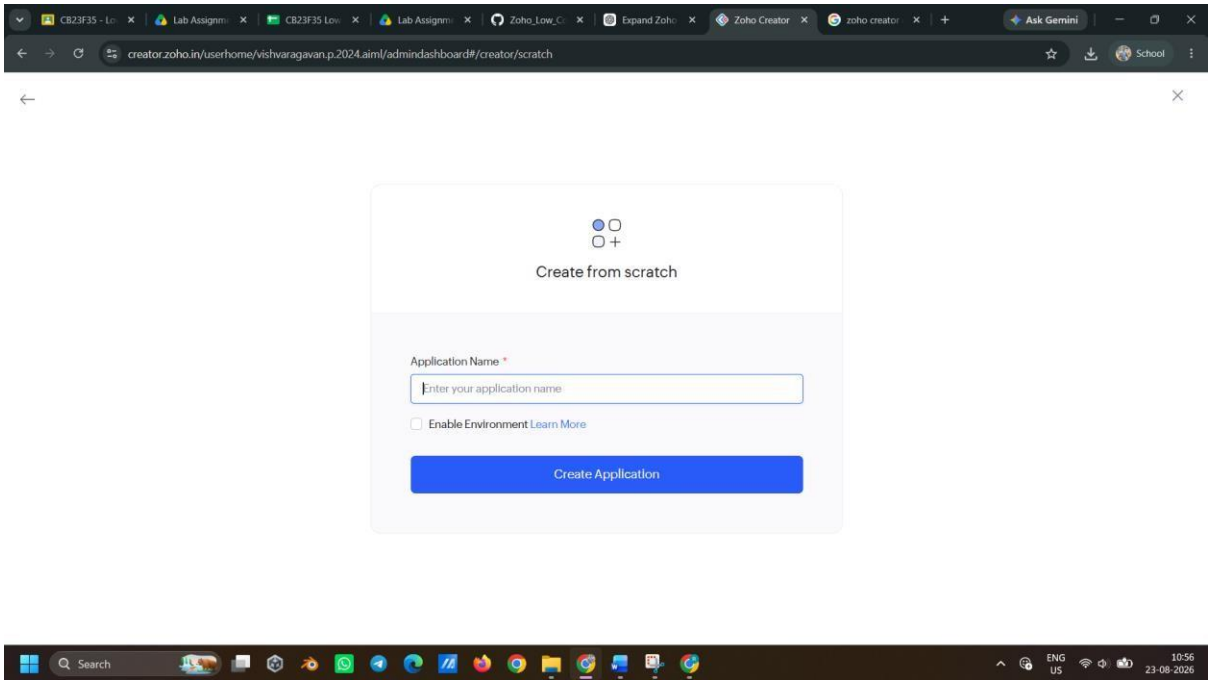

Objective: To extend the existing "Job Application Form" application in Zoho Creator by incorporating all seventeen Advanced Fields available in the Form Builder to capture complex data types effectively.

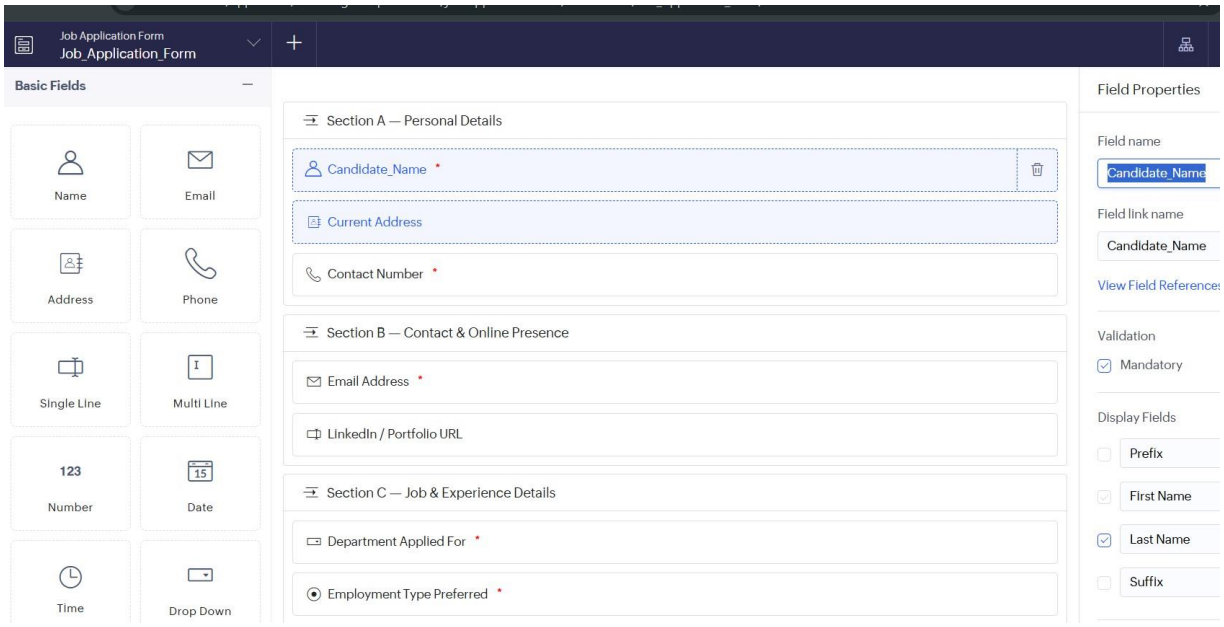

Problem Statement: The basic form lacks real-world application requirements such as capturing an employee directory lookup, employment history (subforms), current CTC calculations, applicant signatures, QR code tracking, and media uploads. This experiment enhances the form to make it a fully functional, enterprise-ready data collection tool.

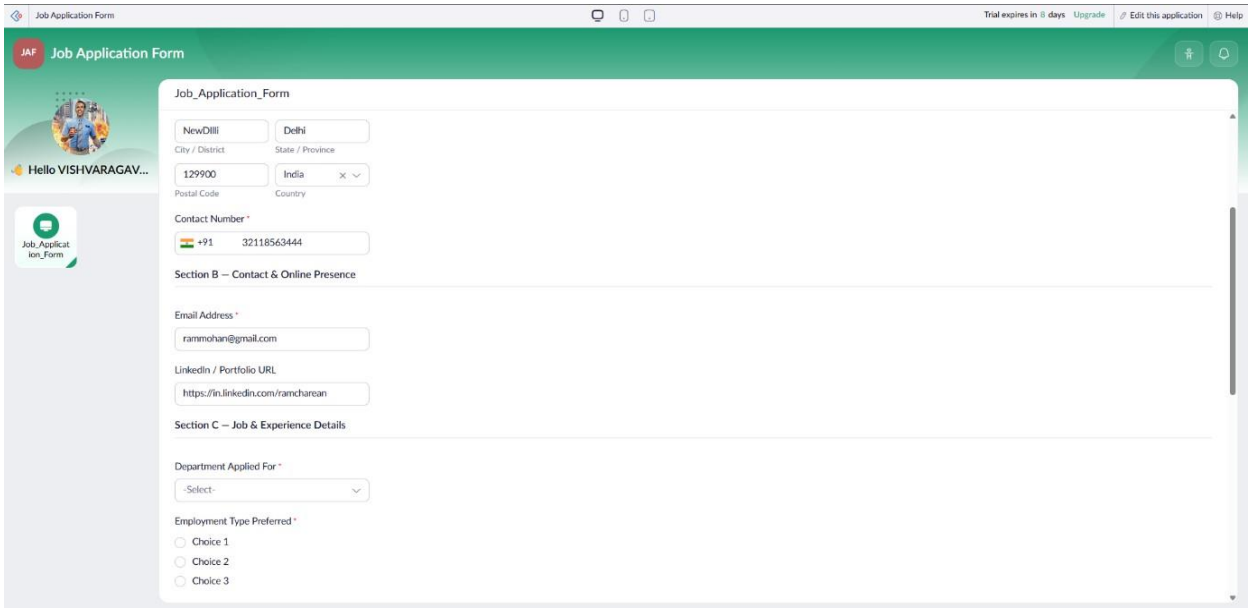

PROCEDURE

1. Scope of the Use Case

- **App Name:** Job Application Form
- **Form Name:** Job Application Form (Extended)
- **Report View:** All Job Applications (Extended)

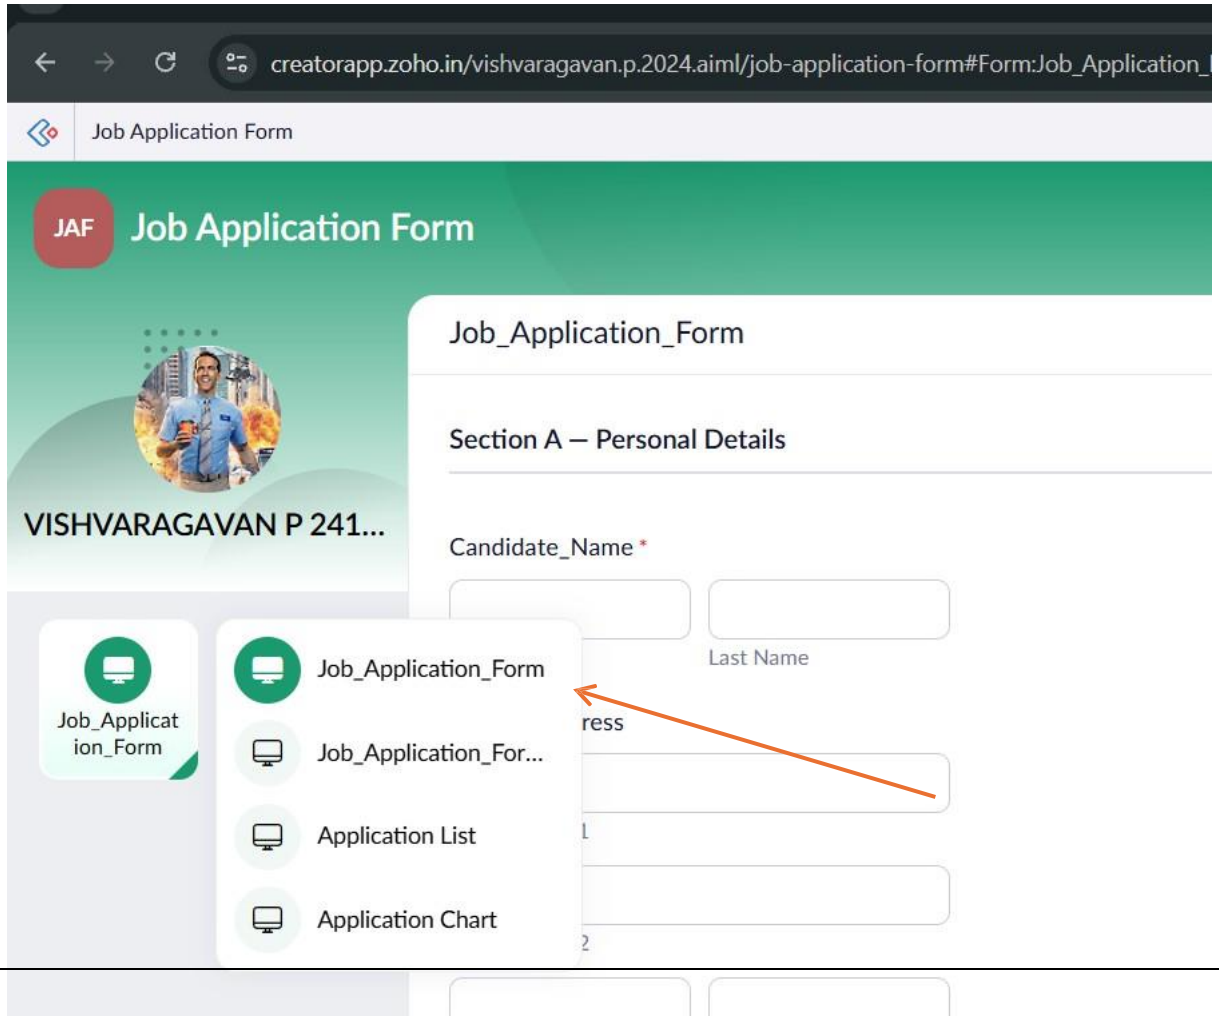

2. Advanced Fields Mapping

Below is the field mapping for integrating advanced data collection into the form:

Field Name	Data Type	Properties / Options
Declaration	Decision Box	Checkbox for terms and conditions
Cover Letter	Rich Text	Allow formatted text input
LinkedIn Profile	URL	URL format validation
Profile Picture	Image	Max file size limit
Score Percentage	Percent	0-100 limit
Expected CTC	Currency	INR/USD format

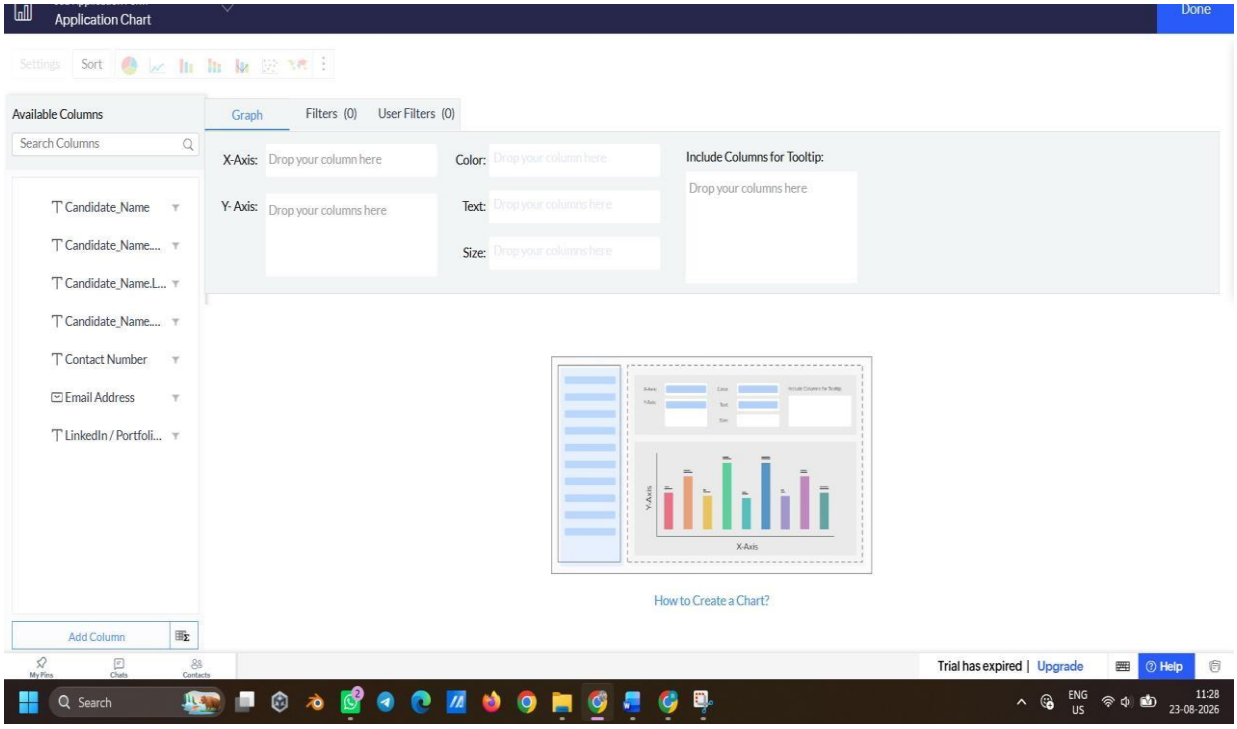

Field Name	Data Type	Properties / Options
Experience (Years)	Decimal	Precision to 1 decimal place
Interview Slot	Date-Time	Date and Time picker
Employment History	SubForm	Related table (Company, Role, Duration)
Referred By	Lookup	Connect to existing Employee Directory
Applicant Signature	Signature	Touch/Mouse signature capture
Resume/CV	File Upload	Restrict to PDF/DOCX
Voice Intro	Audio	Audio file upload
Video Pitch	Video	Video file upload
Application ID	Auto Number	Read-only, auto-generated sequence
Calculated CTC	Formula	Auto-compute based on base and variable
Tracking QR	QR/Barcode	Auto-generate/scan code for tracking

3. Designing the Extended Form Layout

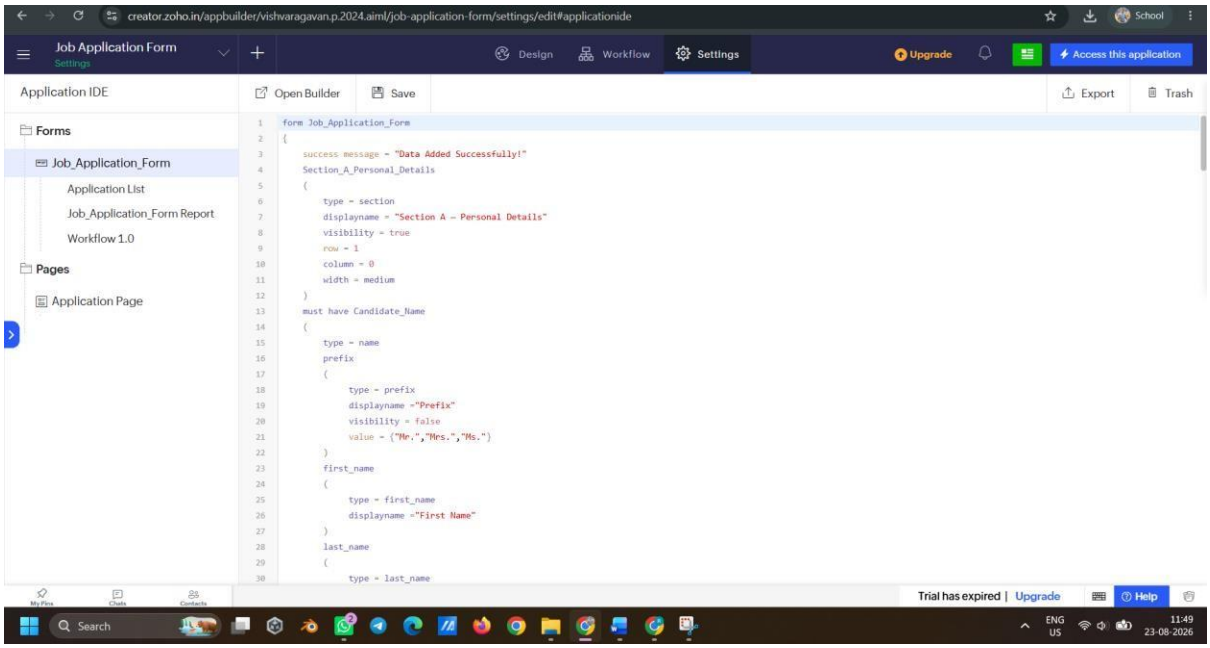

Structure the newly added advanced fields logically across the form using sections:

- **Section E:** Professional Details (Employment History Subform, Expected CTC, Calculated CTC, Experience).
- **Section F:** Media & Attachments (Profile Picture, Resume/CV, Voice Intro, Video Pitch).
- **Section G:** References & Links (Referred By Lookup, LinkedIn Profile).
- **Section H:** Verification & Tracking (Application ID, Tracking QR, Declaration, Applicant Signature).

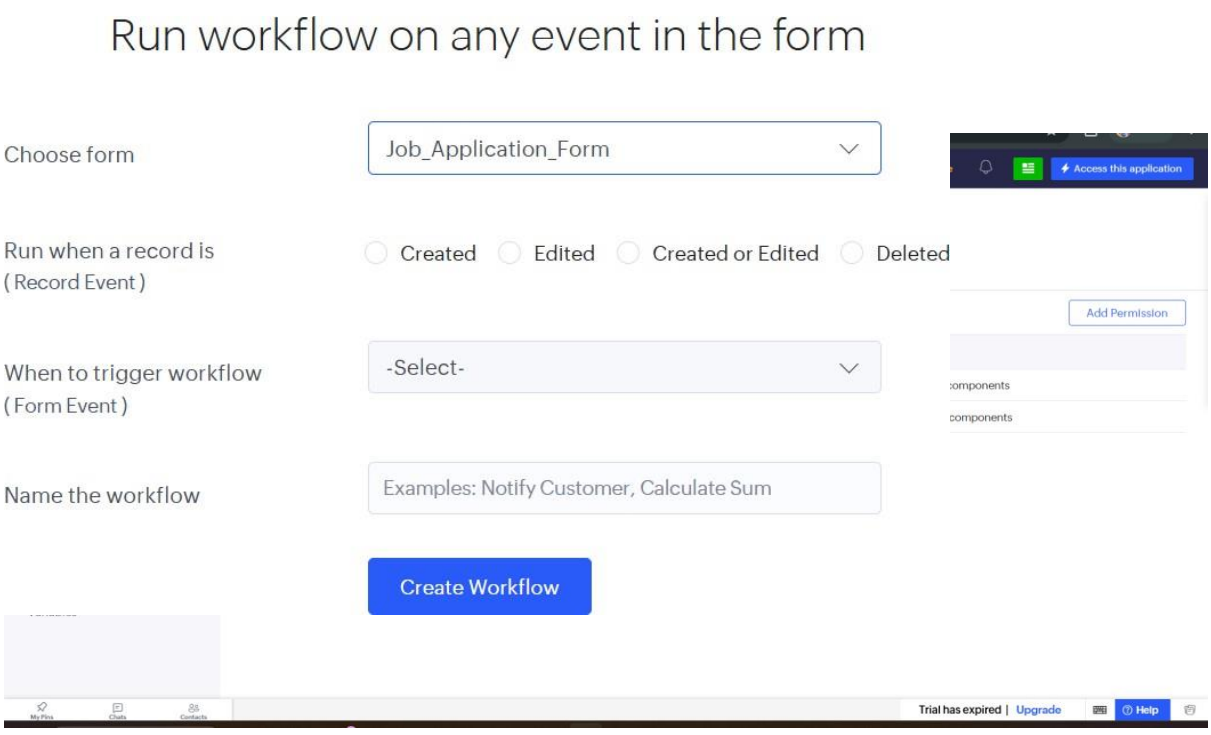

4. Configure Validation & Configuration Rules

- **File Upload Restrictions:** Set "Resume/CV" to only accept `.pdf` and `.docx` extensions.
- **Signature Mandatory:** Ensure "Applicant Signature" is required before form submission.
- **Auto Number Formatting:** Configure "Application ID" to start with a specific prefix (e.g., `APP-1001`).
- **Formula Calculation:** Set up the "Calculated CTC" formula to accurately compute totals dynamically.

5. Workflow Execution

- Open the existing **Job Application Form** in the Zoho Creator Form Builder.
- Drag and drop the necessary **Advanced Fields** from the left pane into the building area.
- Organize the layout by creating the new sections (E, F, G, H).
- Configure field properties (e.g., set Currency type, define Subform fields).
- Apply the validation rules outlined in step 4.
- Save the form and access the application in **Live Mode**.
- Submit a test entry, ensuring you upload files, draw a signature, and test the subform.
- Navigate to the **Report View** to verify that complex data (images, files, signatures) is rendered and stored correctly.

RESULT

Deliverable: A comprehensive, enterprise-ready Job Application Form capable of handling complex data inputs like files, signatures, sub-records, and calculations.

Expected Learning Outcomes:

- Mastery of all 17 Advanced Fields in Zoho Creator.
- Ability to implement subforms for capturing one-to-many relationship data.
- Understanding of how to capture and store multimedia inputs (Images, Audio, Video, Files) and digital signatures.
- Skills to configure auto-generating fields (Auto Number, Formula, QR/Barcode) to streamline data tracking.
