

Experiment 4: Data modelling and form design for a business application in Zoho Creator (LC-05-Job Application)

AIM:

To design and develop a Job Application business application using Zoho Creator by applying concepts of data modelling and form design. The objective is to create a structured candidate data collection system, design a user-friendly application form with multiple sections, configure field validations, generate reports, and implement workflow automation for efficient recruitment management.

PROCEDURE:

1.1. Creating a New Application in Zoho Creator

- Login to the Zoho Creator platform and create a new application for managing job applications.
- Create a new form named Job_Application_Form to collect and store candidate information.
- Select appropriate field types based on the type of data being collected, ensuring proper data organization and easy retrieval.
- The form is designed according to recruitment requirements, where candidate details, job preferences, experience information, and interview-related details are maintained separately.

1.2. Designing the Form Layout Using Sections

The form is divided into four sections to improve readability and provide a better user experience for candidates.

Section A — Personal Details

This section captures the basic personal information of the candidate.

Fields created:

- Candidate Name – Name field with First Name and Last Name options.
- Current Address – Address field used to collect the candidate's residential details.
- Contact Number – Phone field used to store the candidate's mobile number.

These fields help HR identify and contact candidates during the recruitment process.

JAF Job Application Form

Hello VISHVARAGAV...

Job_Application_Form

Section A – Personal Details

Candidate_Name *

First Name Last Name

Current Address

Address Line 1

Address Line 2

City / District State / Province

Postal Code Country

Contact Number *

+91 81234 56789

Section B — Contact & Online Presence

This section collects digital communication details and professional profile information.

Fields created:

- Email Address – Email field used for communication and automated acknowledgement messages.
- LinkedIn / Portfolio URL – Single Line field used to store professional profile links.

The information collected in this section helps recruiters verify candidate profiles and maintain communication records.

[Image Output 2: Contact & Online Presence section]

JAF Job Application Form

Hello VISHVARAGAV...

Job_Application_Form

Contact Number *

+91 81234 56789

Section B – Contact & Online Presence

Email Address *

LinkedIn / Portfolio URL

Section C — Job & Experience Details

- Add a Dropdown field for Department Applied For.
- Add a Radio field for Employment Type Preferred with options:
 - Full-Time
 - Part-Time
 - Internship
- Add a Number field for Years of Experience.
- Add a Multi Select field for Key Skills.
- Add a Date field for Available Joining Date.

[Image Output 3: Job & Experience Details section]

The screenshot displays the 'Job Application Form' (JAF) interface. The header shows 'Job Application Form' and a trial expiration notice. The main content area is titled 'Section C — Job & Experience Details'. The form fields are as follows:

- Department Applied For ***: A dropdown menu with '-Select-' as the current selection.
- Employment Type Preferred ***: Two radio button options: 'Full-time' and 'Part-time'.
- Years of Experience**: A text input field containing the value '0'.
- Key Skills**: A multi-select dropdown menu with '-Select-' as the current selection.
- Available Joining Date**: A date input field showing '07-Aug-2026'.

Section D — Interview Scheduling & Consent

This section is designed to collect interview preferences, additional candidate information, and confirmation of consent from the applicant. It helps the HR team coordinate interview schedules and maintain necessary compliance records during the recruitment process.

Fields created:

- Preferred Interview Time – Add a Time field to allow candidates to specify their convenient time slot for attending an interview. This information helps HR representatives schedule interviews according to candidate availability and improves coordination.

- Cover Letter – Add a Multi Line field to provide candidates with space to describe their professional background, career objectives, achievements, and reasons for **applying** for the position. This additional information helps recruiters understand the candidate's interest and suitability for the role.
- Consent for Background Verification – Add a Checkbox field to obtain candidate approval for background verification if they are selected for the job. The checkbox is configured as a mandatory field to ensure that candidates provide consent before submitting the application.

This section ensures that interview scheduling details, candidate communication, and verification permissions are properly captured and maintained within the Job Application system.

[Image Output 4: Interview Scheduling & Consent section]

The screenshot displays the 'Job Application Form' (JAF) interface. On the left, there is a sidebar with a green header 'JAF Job Application Form', a profile picture of a man, and the text 'Hello VISHVARAGAV...'. Below this is a green icon representing a job application form. The main content area is titled 'Job_Application_Form' and 'Section D – Interview Scheduling & Consent'. It contains a 'Preferred Interview Time' field with a time picker (HH:mm:ss), a 'Cover Letter' text area, and a consent section with the text 'I consent to background verification if selected *' and three radio button options: 'Choice 1', 'Choice 2', and 'Choice 3'. A green 'Submit' button is at the bottom.

2. Configure Field Validation Rules

- Set Candidate Name, Email Address, Contact Number, Department Applied For, Employment Type Preferred, and Consent Checkbox as mandatory fields.
- Enable built-in email format validation for the Email field.
- Configure Indian country code format validation for the Phone field.
- Restrict Years of Experience value between 0 and 40.
- Configure Available Joining Date to prevent selection of previous dates.
- Ensure the form submission is allowed only when the consent checkbox is selected.

[Image Output 5: Validation settings in Zoho Creator]

3. Create Candidate Application Report

- Generate a report named **Candidate_Application_Report**.
- Configure the report to display submitted candidate records.
- Enable filtering based on Department Applied For and Key Skills to help HR review applications.

[Image Output 6: Candidate Application Report view]

4. Configure Workflow Automation

- Create a workflow that triggers when a candidate submits the form.
- Validate the entered information automatically.
- Store the submitted details as a new record in Candidate_Application_Report.
- Send an acknowledgement email to the candidate using the provided Email field.
- Allow HR users to review applications and schedule interviews based on Preferred Interview Time.

[Image Output 7: Workflow configuration]

The screenshot displays the Zoho Creator 'Job Application Form' builder interface. The main workspace shows a form layout with the following fields and sections:

- Fields:**
 - Employment Type Preferred (radio button)
 - Years of Experience (text)
 - Available Joining Date (calendar)
- Section D -- Interview Scheduling & Consent:**
 - Preferred Interview Time (radio button)
 - Cover Letter (text)
 - I consent to background verification if selected (checkbox)

The left sidebar contains various field types: Percent, Currency, Decimal, Date-Time, SubForm, Lookup, Signature, File upload, Audio, Video, Auto Number, Formula, and QR/Barcode.

The right sidebar shows the **Field Properties** for the selected 'Key_Skills' field:

- Field name:** \$
- Field link name:** Key_Skills
- Choices:**
 - Renaming the choices will update the values in the existing records, if any.
 - Choice 1, Choice 2, Choice 3 (each with +, -, and edit icons)
 - Alphabetical Order (checkbox)
- Validation:**
 - Mandatory (checkbox)
- Data Privacy:**
 - Contains personal data (P) (checkbox)
- Visibility:** Show field to (dropdown)

The bottom status bar indicates 'Trial expires in 8 days' and provides links for 'Upgrade', 'Get started faster!', and 'Help'.

[Image output 8: Live Filling of the form]

5. Test the Application

After completing the form design, validations, and workflow configuration, the Job Application system is tested to ensure that all components function correctly.

Testing steps:

- **Open the public form link** – Access the published Job Application Form using the public URL provided by Zoho Creator. The live form preview is checked to ensure that all sections, fields, and layouts are displayed properly.
- **Enter sample candidate details** – Fill the form with sample candidate information including personal details, contact information, job preferences, experience details, interview availability, and consent details.
- **Submit the form after completing all mandatory fields** – Verify that the application can be submitted successfully when all required fields contain valid information.
- The submission process is checked to confirm that the form works without errors.
- **Verify records are successfully created in the report** – After submission, the entered candidate details are checked in the **Candidate_Application_Report** to confirm that the data is stored correctly and displayed in the report view.
- **Check validation rules prevent incorrect entries** – Test the configured validation rules by entering invalid data, such as an incorrect email format, empty mandatory fields, invalid phone number format, experience values outside the allowed range, or

selecting a past joining date. Confirm that Zoho Creator displays appropriate validation messages and prevents incorrect submissions.

This testing process ensures that the Job Application Form is reliable, user-friendly, and capable of collecting accurate candidate information for HR processing.

Section C – Job & Experience Details

Department Applied For: -Select-

Employment Type Preferred:

- ☐ Choice 1
- ☐ Choice 2
- ☐ Choice 3

RESULT

The **Job Application business application** was successfully designed and implemented in **Zoho Creator**. A structured form with four sections and required fields was created, validation rules were applied, and the **Candidate_Application_Report** was generated to store submitted applications. The workflow successfully supports automated acknowledgement emails and helps HR manage candidate information efficiently through filtered reports.
